Subject: Shuttle Video Tapes? Different TV standards
Ref: Append at 12:56:12 on 93/02/16 GMT (by 68100646 at TOROHON1)

VHS is not always VHS.

Canada and the United States use VHS / NTSC *.
I think Europe's standard is VHS / PAL **, like Australia's.
My dad found that out the hard way coming back from Australia last
year with an armful of 'really neat' Australian VHS travelog tapes.

 * NTSC (National Television Standards Committee)
** PAL (Phase Alteration by Line)

Yep, I know that there are different standards.
My TV and VTR do have a multi-standard-mode, so that I can
use PAL, SECAM, and NTSC (Never the same color :-))

But I would prefer PAL Videos because I could give them
to friends...

BTW. Thanks to all who sent me notes and gave me hints...

Subject: Shuttle Video Tapes?
Ref: Append at 13:35:52 on 93/02/26 GMT (by LMMOORE at BCRVMPC1)

In case anyone is interested, the company I mentioned about the
shuttle videos is called Video Vision. Their address is:

  7 Waverly Place, Madison, NJ 07940

To the best of my knowledge, they only have videos for laserdisks.
I have a collection of disks called "Space Archive" which covers the
Shuttle and some Apollo mission.

I used to get shuttle laser disks from a company called Video Vision.
I have such videos such as the Solar Max retrieval and Apollo 17. These
videos do not come out on tape since they contain still photographs
(such as 'secret' Soviet runways) as well as video.

I don't have the address offhand, but if interested, send a note to me
and I'll send you any info I have.

Also, "The Dream Is Alive" is also out on laserdisk. This is the same
movie shown at the Kennedy Space Center. I have seen it at some retail
dealers. If you can get it, I would HIGHLY recommend it.
